## 我该如何从技术支持网站下载软件产品补丁？

### 问题描述

我该如何从AspenTech技术支持网站 ([esupport.aspentech.com](http://esupport.aspentech.com)) 下载软件产品补丁？

### 解决方案

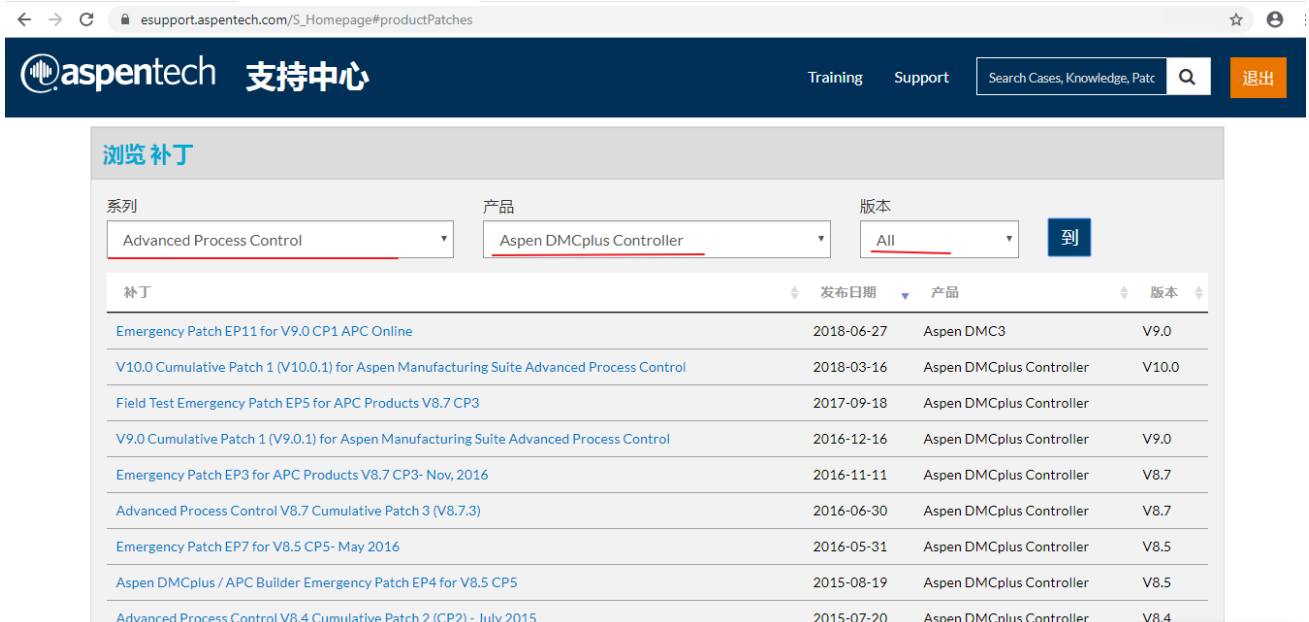

**方法 1:** aspenONE Update Center (更新中心)。请单击技术支持文章 [KB 000044152](#) 以了解如何使用 aspenONE 更新中心。

## 方法 2:

1. 请登录到 AspenTech 技术支持网站 <https://esupport.aspentech.com/>
2. 鼠标滚动到页面底部，在下载类别中，单击产品补丁链接（如下图所示）。

3. 使用下拉框选择补丁的系列、产品和版本，然后点击蓝色‘到 (go)’按钮执行查询。单击可用的补丁。

4. 在跳转的页面中，按照补丁程序说明中提供的说明，下载并安装补丁。例如:

**V10.0 Cumulative Patch 1 (V10.0.1) for Aspen Manufacturing Suite Advanced Process Control****Product and Version**

This patch should be applied to the following versions of Aspen Manufacturing Suite Advanced Process Control products:

- V10.0

**Important:** Install this patch consistently among all servers that host Aspen Advanced Process Control online applications, Aspen Watch Performance Monitor, and Aspen Production Control Web Server. Failure to consistently install the patch kits for upgrading APC Online, APC Watch Server, and APC Web Server to V10.0.1 may result in data collection and licensing issues.

**Impact on Other Products**

The following products are affected by this patch:

- (Not applicable.)

**Changes in Program Behavior**

The following differences in program behavior or results should be noted with this patch (or version) of the software:

**Aspen DMC3 Builder**

As of V10.0.1, the following two entries, **EnableSetpointExtendedValidation** and **WriteFailureLimit**, are added as final safeguards of control moves validation and verification.

**EnableSetpointExtendedValidation**

Enable extended validation of changes to setpoint values.

- No (0)
- Yes (1)

When setpoint extended validation is enabled, and the controller is permitted to write setpoints, the controller will perform additional checks to ensure that the setpoint change calculated by the controller or by user calculations does not violate maximum movement constraints or exceed operator, engineering, or validity limits.

**Note:** This extended validation examines the Setpoint entry for each MV. In a controller that is configured to write setpoints through another entry (e.g., a user
